ABSTRACT

Background: Hallucination is an absorption of the five senses without any external stimuli, healthy people have accurate perception, are able to identify and interpret stimuli based on the information they receive through the five senses.

Objective: to determine the implementation of the implementation of nursing actions of Generalist Therapy (SP 1-4) in schizophrenia patients with auditory hallucinations in Karangkemiri Village, Jeruklegi District.

Methods: This scientific work uses a case study method with a nursing process approach consisting of assessment, diagnosis, intervention, implementation and nursing evaluation. Data collection techniques were carried out through interviews and observations in Karangkemiri Village, Jeruklegi District which was carried out on July 20-24, 2024.

Results: Based on case studies on the application of generalist therapeutic nursing actions (SP 1-4) in schizophrenic patients with sensory perception problems: auditory hallucinations that the assessment stage has been carried out in accordance with the theory including the assessment of hallucinations must be studied in detail about recognizing hallucinations, types of hallucinations, content, time, frequency, situations that cause hallucinations, and patient responses to hallucinations. Nursing diagnosis on Mr. G Mr. G is a sensory perception disorder: auditory hallucinations. This diagnosis is based on supporting subjective and objective data. Nursing interventions planned for Mr. G are tailored to the patient's condition. G is adjusted to the patient's condition. Nursing implementation is carried out for 4 days based on the interventions that have been prepared. After carrying out nursing actions for 4 days, it is continued by evaluating nursing actions regarding the patient's ability and frequency of hallucinations in Mr. G.

ABSTRAK

Latar Belakang: Halusinasi merupakan suatu penyerapan pancaindra tanpa ada rangsangan dari luar, orang sehat persepsinya akurat, mampu mengidentifikasi dan menginterpretasikan stimulus berdasarkan informasi yang diterimanya melalui pancaindra.

Tujuan: untuk mengetahui pelaksanaan penerapan tindakan keperawatan Terapi Generalis (SP 1-4) pada pasien Skizofrenia dengan Halusinasi Pendengaran di Desa Karangkemiri Kecamatan Jeruklegi.

Metode: Karya ilmiah ini menggunakan metode studi kasus dengan pendekatan proses keperawatan yang terdiri dari pengkajian, diagnosa, intervensi, implementasi dan evaluasi keperawatan. Teknik pengumpulan data dilakukan melalui wawancara dan observasi di Desa Karangkemiri Kecamatan Jeruklegi yang dilakukan pada tanggal 20 - 24 Juli 2024.

Hasil: Berdasarkan studi kasus tentang penerapan tindakan keperawatan terapi generalis (SP 1-4) pada pasien skizofrenia dengan masalah gangguan persepsi sensori: halusinasi pendengaran bahwa pada tahap pengkajian sudah dilakukan sesuai dengan teori diantaranya pada pengkajian halusinasi harus dikaji secara detail mengenai mengenal halusinasi, jenis halusinasi, isi, waktu, frekuensi, situasi yang menimbulkan halusinasi, dan respon pasien terhadap halusinasi. Diagnosa keperawatan pada Tn. G yaitu gangguan persepsi sensori: halusinasi pendengaran. Diagnosa ini diangkat berdasarkan data subjektif dan objektif yang mendukung. Intervensi keperawatan yang direncanakan kepada Tn. G disesuaikan dengan kondisi pasien. Implementasi keperawatan dilakukan selama 4 hari berdasarkan intervensi yang telah disusun. Setelah dilakukan tindakan keperawatan selama 4 hari dilanjutkan dengan melakukan evaluasi tindakan keperawatan mengenai kemampuan pasien dan frekuensi halusinasi pada Tn. G
